

Keep clear, keep going.

When the going gets tough take the safer path

**Keeping roads, pavements
and parking lots clear from
snow and ice keeps people
safe, and traffic flowing
freely.**

Safety first

When there is snow and ice, keeping people safe and preventing accidents is a vital job. Allowing us to arrive at work on time and go about our daily lives involves choosing and using the safest deicer – Calcium Chloride (CC).

Safest & most effective method

CC road® is the best salt-based deicer because it releases heat in contact with moisture. This prevents ice forming and deices surfaces quicker when snow and ice have formed. Its superior performance makes CC road® the safest and most effective choice for roads, pathways, parking lots and entrances to buildings.

Productive & cost-efficient performance

Productivity and uncompromising performance are the hallmarks of CC road®. As the brand leader you can rely on its premium properties in terms of melting, ease of application, speed of action and effectiveness in very low temperatures. Its lower dosage requirements, and ability to be blended with less effective salts to improve their de-icing properties, provides very cost efficient solutions too.

Leading with competence, delivering with care

We are The CC Specialists and the global market leader in CC technology. We have an

unrivalled knowledge, and competence to help you find the best de-icing solution. The CC road® product quality and consistency ensures you always get the best results no matter what the weather.

As an open and accessible company we are flexible and easy to do business with. We provide a reliable and caring service that builds the trust and confidence of our customers and distributors. Our logistics and service infrastructure is ready to support you wherever you are located in Europe. Call us to find out more about why CC road® is the world's favourite de-icer.
